March 3, 2005

Sir:

Neither the Applicant nor the undersigned have any record of receiving the Notice of Allowance and Issue Fee Due communication from the U.S. Patent and Trademark Office. Attached is Applicant's Invention Data form showing receipt of the September 4, 2003 Final Office Action, but no record of receipt of the Notice of Allowance and Issue Fee Due form.

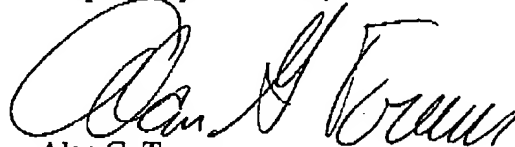

Applicant's failure to timely pay the issue fee was inadvertent because Applicant was not aware that a Notice of Allowance and Issue Fee Due had been issued by the Patent Office, nor was Applicant aware of the due date for paying the issue and publication fees.

805477v1

- 2 -

On February 14, 2005, the undersigned received by facsimile from the Examiner the Notice of Allowability and Notice of Allowance and Issue Fee Due for this application. Accompanying this Petition is the completed Part B – Fee(s) Transmittal sheet, including our authorizations to charge the issue and publication fees to our Deposit Account No. 500859.

Respectfully submitted,

Alan G. Towner

Title: Flexible Wall Material for Use in a Inflatable Structure-CIP of
09/206,732 12/07/1998

Priority Date: 12-Jul-1998

Country:

Abstract: Invention related to airships with a volume in 15 to 60 million cubic feet of Helium. Relates to improved structural envelope gas bags or outer covers for lighter than air and neutral buoyancy airships. The material is a multi layer cloth assembly including at least 2 plies of fiber cloth said cloth comprising 56 X56 yarns/inch with a total weight of 150-450 g/m2, with the fiber of the individual cloth layers having a denier generally between 180 and 280 and with the fill of the individual plies at 90 degrees to each other. The filaments should be between 200-215 denier. Fibers of each layer of cloth are selected from one group consisting of extended chain polyethylene polymer or thermotropic liquid (melt spun) crystalline polymer. The extended chain polyethylene fiber is a woven modified rip stop weave architecture while the thermotropic liquid, melt spun, crystalline polymer fiber is a 2X2 basket weave architecture.
